£7,963.00

Calculated Source Reve...
£8,534.40

Estimated Contribution
£571.40
Profit / positive

Average Stops per Rout...
76.2

Estimated Contribution = currently recognised source revenue minus currently recognised driver pay. This is not final profit and may exclude vehicle costs, management payments, fees, deductions, tax/VAT, or other commercial income/costs until they are configured or imported.

ACTIVITY

Completed stops by day**Top drivers by completed stops**

Start here

1. Work through the guide in order the first time.
2. Your own figures will differ from the fictional demo figures shown here.
3. Do not upload real customer or personal data to the public website demo.
4. Advanced tools such as File Mapping, Recalculation and Scenario Analysis are used only when needed.

Normal daily route: Dashboard > Drivers (if needed) > Daily Operations > Issues & Review > Reports & Analysis

Dashboard Overview

See the day's operational picture at a glance

The Dashboard is the first place to look. It summarises the selected period, shows the main operational totals and gives a quick financial view.

Follow these steps

- 1 Choose the source**
Use Carrier / contract source to view one source or leave it on All Sources.
- 2 Choose the period**
Select the Dashboard period you want to review.
- 3 Read the operational cards**
Check drivers in view, imported records, completed stops and anything open for review.
- 4 Read the financial cards**
Check calculated driver pay, source revenue, estimated contribution and average stops per route.

- ✓ **Quick status check**
See the main operational position without opening every section.
- ✓ **Open / Review**
Anything needing attention is surfaced before you move on.
- ✓ **Contribution is an estimate**
The figure shown is not final profit unless all operating costs are configured.

NOTE Your figures will be different because they depend on the selected period and your imported data.

Dashboard Activity & Daily Totals

Understand what is driving the headline figures

Scroll down the Dashboard to see daily activity, the highest-volume drivers and the daily totals behind the summary cards.

Follow these steps

- 1

Check completed stops by day
Use the line chart to spot changes in activity across the selected period.
- 2

Check top drivers
The driver chart shows who recorded the most completed stops.
- 3

Read the daily totals
Use the table to confirm daily stops, driver net pay and source revenue.
- 4

Confirm the active profile
The left panel shows which example company and contract profile is active.

- ✓

See movement by day
Useful for spotting unusually busy or quiet days.
- ✓

See driver activity
Quickly compare completed-stop volume across drivers.
- ✓

Verify the numbers
The daily table gives the detail behind the charts.

Driver Management

Keep the driver register current without losing history

Use Driver Management for day-to-day driver administration. Drivers who leave should normally be marked as Left rather than deleted so historic records remain intact.

FASHEARN ROUTEOPS — configurable operations management build.

D004	Taylor Reed	Active	Example Delivery Contract	Example Parcel Network	2026-07-16		Vauxhall Mr

Follow these steps

- 1 Check the summary cards**
See active, inactive, left / leaver and total driver record counts.
- 2 Choose what to show**
Use the Show filter to view Active drivers or another status.
- 3 Review the driver register**
Check driver ID, name, status, pay / contract profile, carrier, dates and vehicle.
- 4 Keep leavers as history**
Use Mark Driver as Left when someone leaves instead of deleting their record.

- ✓ **One driver register**
Keeps the current team and historical leavers in the same controlled record.
- ✓ **Contract awareness**
Each driver can be linked to the correct pay / contract profile.
- ✓ **Audit continuity**
Historical pay and reporting remain available when a driver leaves.

Add New Driver

Add a new driver before entering daily work

The Add New Driver tab creates a new driver record. RouteOps assigns the internal driver ID automatically.

Follow these steps

- 1 **Open Drivers > Add New Driver**
Choose the Add New Driver tab at the top of Driver Management.
- 2 **Enter the main details**
Add the driver name, status, pay / contract profile and start date.
- 3 **Add optional details**
Vehicle, registration, own-van status, phone, email and notes can be completed as required.
- 4 **Click Add Driver**
Save the record, then use Edit Driver later if any details change.

- ✓ **Automatic internal ID**
RouteOps assigns the internal driver ID for you.
- ✓ **Correct pay profile matters**
Choose the right profile because it affects later pay calculations.
- ✓ **Keep details editable**
Use Edit Driver for changes and Mark Driver as Left for leavers.

Daily Operations

Use this as the normal day-to-day workspace

Daily Operations is where the working day is entered and reviewed. Set the work date, record who worked, enter routes and stops, then review RouteOps calculations before saving.

Follow these steps

- 1 Set the work date**
Confirm the date you are entering before touching the worksheet.
- 2 Use Daily Entry**
The Daily Entry tab is the normal place to enter today's work.
- 3 Check the day summary**
Active drivers, already saved, saved stops and saved net pay show the day's current state.
- 4 Scroll to the worksheet**
The Daily worksheet contains one row for each active driver.

- ✓ Normal daily workspace**
Designed to replace repeated spreadsheet entry.
- ✓ Saved-day visibility**
You can see whether the selected date has already been saved.
- ✓ Historical imports stay separate**
Imported historic data is kept separate from the live daily-entry workflow.

Daily Worksheet

Record who worked and what they completed

The worksheet is deliberately spreadsheet-like, but RouteOps controls the calculations. Each active driver appears as a row.

EXAMPLE COMPANY DATA

Do not upload real customer or personal data to the public demo.

ACTIVE PROFILE

Example Delivery Contract

Daily worksheet

This deliberately resembles the old spreadsheet workflow, but RouteOps controls the calculations.

Worked	Internal ID	Driver	Route	Stops	Vehicle	Own Van	Notes
☐	D001	Alex Morgan		0	EX24 ROP	☐	
☐	D006	Casey Hughes		0	EX24 MGT	☐	
☐	D002	Jamie Patel		0	EX24 OPS	☐	
☐	D005	Jordan Blake		0	EX24 SYS	☐	
☐	D007	Morgan Ellis		0	EX24 INT	☐	
☐	D008	Riley Shaw		0	EX24 DEM	☐	
☐	D003	Sam Carter		0	EX24 LAB	☐	
☐	D004	Taylor Reed		0	EX24 DAT	☐	

Tick at least one driver as Worked to build today's calculation.

Follow these steps

- 1 Tick Worked**
Tick the Worked box only for drivers who worked on the selected date.
- 2 Enter route and stops**
Add the route and completed stops for each working driver.
- 3 Check vehicle / own van**
Confirm vehicle details and the Own Van box where relevant.
- 4 Add a note if needed**
Use Notes for useful operational context, then continue to the calculation and save stage.

- ✓ **Only working drivers count**
At least one driver must be marked Worked before a calculation can be built.
- ✓ **Consistent daily entry**
The same controlled structure is used for every driver.
- ✓ **RouteOps does the maths**
The worksheet captures inputs; RouteOps applies the configured rules.

Driver Pay Review

Check calculated pay before treating it as complete

Driver Pay shows calculated pay records from operational data. Use the filters and status column to review the results before relying on them.

2026-09-15	Casey Hughes	Example Delivery Contract Example Parcel Network Parcel Network A	None	90	£227.00	£2.50	£224.50	CLEAR

Follow these steps

- 1

Use the filters
Filter by source, date, driver or status to find the records you need.
- 2

Check the summary
Review gross pay, deductions, net pay and any records under review.
- 3

Check each row
Confirm stops, gross pay, deductions, net pay and status for the driver.
- 4

Investigate anything under review
Open Issues & Review if a record is not clear.

- ✓

Pay is traceable
Each result stays linked to its date, driver and source.
- ✓

Deductions are visible
Gross, deduction and net figures are separated.
- ✓

Review status matters
Do not ignore records shown as under review.

Smart Import

Start with the files the business already uses

Smart Import is the recommended starting point when bringing existing business files into RouteOps. Upload the files and let RouteOps identify what it can use.

Follow these steps

- 1 **Open Import Data > Smart Import**
Choose Smart Import from the Import workspace dropdown.
- 2 **Upload the business files**
Add one or more supported Excel, CSV or ODS files.
- 3 **Let RouteOps analyse them**
RouteOps looks for likely operational, onboarding or commercial data.
- 4 **Review what was found**
Keep useful data and move to mapping only when the file layout needs more control.

- ✓ **Recognise likely data**
RouteOps tries to identify what each file contains.
- ✓ **Explain the result**
The import flow shows what was found and what may be missing.
- ✓ **Mapping is the fallback**
Use File Mapping for layouts that cannot be recognised safely.

NOTE Do not upload real customer or personal data to the public website demo.

Customer Onboarding

Start with partial information and complete it later

Customer Onboarding lets you retain useful partial information instead of waiting for a perfect spreadsheet. The demo shows Driver Name as the required identity field for a staged row.

FASHEARN ROUTEOPS — configurable operations management build.

Import workspace

Customer Onboarding ▾

Fashearn RouteOps MAIN v1.0

Customer Onboarding

Start with the data the customer already has — complete the rest later

A customer does not need a perfect spreadsheet before using RouteOps. Partial information can be retained first and completed later. Driver Name is the required identity field for a staged row.

Staged Records
0

Still Partial
0

Ready for Operations
0

[Add Manually](#)
[Import Partial Spreadsheet](#)
[Complete Staged Data](#)

Add whatever is known

Driver Name *	Work Date
	YYYY-MM-DD — can be left blank
Completed Stops	Route
Can be left blank	Can be left blank
Vehicle / Registration	Phone
Can be left blank	Optional
Email	
Optional	
Notes	
Optional	

[Save Partial Record](#)

Follow these steps

- 1 Choose Customer Onboarding**
Select it from the Import workspace dropdown.
- 2 Use Add Manually**
Enter whatever is currently known about the driver or work record.
- 3 Save the partial record**
Fields can be left blank where the information is not yet available.
- 4 Complete it later**
Use Import Partial Spreadsheet or Complete Staged Data when more information becomes available.

- ✓ **Partial data is useful**
You do not need to reject a whole record because some details are missing.
- ✓ **Staged records stay separate**
Incomplete records can be held until they are ready for operations.
- ✓ **Finish later**
Missing dates, stops, route, vehicle or contact details can be added afterwards.

File Mapping

Create a reusable map for a carrier file layout

File Mapping is used when a carrier spreadsheet needs its columns mapped into the RouteOps structure. Saving a mapping is a preview/configuration step and does not itself import live operational records.

Follow these steps

- 1 **Choose File Mapping**
Select the correct contract / profile first.
- 2 **Confirm the carrier label**
Check the mapping carrier / customer label shown on screen.
- 3 **Upload a sample file**
Use a CSV or Excel sample so RouteOps can inspect the layout.
- 4 **Review and save the mapping**
Once correct, save it so the same file layout can be validated and reused later.

- ✓ **Standardise carrier files**
Different spreadsheet layouts can map into the same RouteOps structure.
- ✓ **Reusable setup**
A saved mapping avoids rebuilding the same column mapping every time.
- ✓ **Preview before live import**
Mapping lets you check the structure before operational data is accepted.

Controlled Carrier Import

Validate before data reaches live operations

Controlled Carrier Import is for validated carrier files. Use Sandbox / Test first when you want to check a file without changing live operations.

Follow these steps

- 1 Choose Advanced Controlled Import**
Open it from the Import workspace dropdown.
- 2 Choose Sandbox / Test or Live Import**
Use Sandbox / Test first when validating a new or changed file.
- 3 Confirm a mapping exists**
Create and save an Import Mapping before using the controlled import flow.
- 4 Proceed only after checks pass**
Use Live Import only when you are satisfied that the file and mapping are correct.

- ✓ Safe testing**
Sandbox records the test batch separately.
- ✓ Protect live data**
Sandbox does not change dashboard totals, driver pay, reports or historical records.
- ✓ Controlled acceptance**
Live import follows validation rather than accepting unverified files.

NOTE For a first-time user, stay in Sandbox / Test until the file has been checked.

Exception Centre

Find and review operational exceptions

The Exception Centre brings unusual or flagged operational records into one place. Use the filters to narrow the list and then select the record you want to review.

FASHEARN ROUTEOPS — configurable operations management build.

Select exception

#1 | Casey Hughes | Unusually high stops | Open

Driver: Casey Hughes

Date: 2026-09-24

Source: Example Delivery Contract | Example Parcel Network | Parcel Network A

Severity: Warning

Category: Unusually high stops

Current status: Open

Import batch: Legacy

Follow these steps

- 1 Choose Issues & Review > Exceptions**
Open Exceptions from the Review workspace dropdown.
- 2 Use the filters**
Filter by severity, driver, status or source.
- 3 Read the status cards**
Open, Under Review, Resolved and Showing summarise the current list.
- 4 Select the exception**
Choose the record in Review exception to see the details and system reason.

- ✓ **One review queue**
Exceptions are kept together rather than hidden in separate spreadsheets.
- ✓ **Clear status**
You can see what is open, being reviewed or resolved.
- ✓ **Source traceability**
Each exception stays linked to its driver, date and source.

Review an Exception

Record the decision and keep the audit trail

After selecting an exception, read the details and system note, record who reviewed it, choose the new status and save a review note.

Follow these steps

- 1 Confirm the selected exception**
Check the driver, date, category, source, status, import batch and severity.
- 2 Read the system note**
Understand why RouteOps created the exception before changing its status.
- 3 Enter the review outcome**
Complete Reviewed by, choose the new status and add a useful review note.
- 4 Save Exception Review**
Save the decision so the status and audit trail stay current.

- ✓ **Explain the decision**
Review notes make later checks much easier.
- ✓ **Change status deliberately**
Keep an exception Open until it has genuinely been dealt with.
- ✓ **Maintain an audit trail**
RouteOps keeps the record of the review rather than overwriting the history.

Controlled Recalculation

Preview changes before historical records are updated

Controlled Recalculation lets you test proposed source-rate or driver-pay changes. Nothing changes until the recalculation is explicitly approved.

The screenshot shows the 'Controlled Recalculation & Validation' interface. On the left is a sidebar with 'Appearance' (Light mode toggle), 'Navigation' (Dashboard, Drivers, Daily Operations, Import Data, Issues & Review, Reports & Analysis), 'Review workspace' (Recalculation dropdown), and 'Fashearn RouteOps MAIN v1.0'. Below this is a 'PUBLIC WEBSITE DEMO' section with 'Interactive demonstration' and 'Fictional Example Company data · isolated session'. A green button labeled 'EXAMPLE COMPANY DATA' is present. The main content area has a title 'Controlled Recalculation & Validation' and a subtitle 'Preview changes before any historical operational records are updated'. A green box states: 'Nothing is changed until you explicitly approve the recalculation. Previewing is safe and does not alter live or historical records.' Below this are two sections: '1. Choose what to recalculate' with checkboxes for 'Recalculate source revenue' and 'Recalculate driver pay', and a blue button 'Select at least one recalculation type to build a preview.'; and '2. Proposed recalculation settings' with a 'Proposed source rate per completed stop (£)' input field set to '2.80' and a note 'Current configured source rate: £2.80 per completed stop.' Below this is 'Proposed driver pay rules' with a note 'This is a temporary copy for the preview. Editing it does not change Settings.' and a table of rules.

	ID	Min Drops	Max Drops	Fixed Pay	Extra / Drop	Rule Label	Order
	1	1	52	£150.00	£0.00	Up to 52 drops	1
	2	53	57	£160.00	£0.00	53 to 57 drops	2
	3	58	62	£170.00	£0.00	58 to 62 drops	3
	4	63	67	£180.00	£0.00	63 to 67 drops	4

Follow these steps

- 1 **Choose Recalculation**
Open it from the Review workspace dropdown.
- 2 **Choose what to recalculate**
Tick source revenue, driver pay, or both.
- 3 **Review the proposed source rate**
Check the proposed rate against the currently configured rate.
- 4 **Review the pay-rule preview**
The rule table is a temporary copy for the preview, not a live Settings change.

- ✓ **Preview safely**
You can inspect the effect before historical records are touched.
- ✓ **Validate logic**
Useful when rates or pay bands are being changed.
- ✓ **Protect existing records**
Previewing is safe and does not alter live or historical records.

NOTE Do not approve a recalculation until the preview has been checked carefully.

Recalculation Pay Rules

Check every pay band before building the preview

The lower part of the recalculation page shows the temporary driver-pay rule set that will be used for the preview.

Proposed source rate per completed stop (£)

2.80

Current configured source rate: £2.80 per completed stop.

Proposed driver pay rules

This is a temporary copy for the preview. Editing it does not change Settings.

ID	Min Drops	Max Drops	Fixed Pay	Extra / Drop	Rule Label	Order
1	1	52	£150.00	£0.00	Up to 52 drops	1
2	53	57	£160.00	£0.00	53 to 57 drops	2
3	58	62	£170.00	£0.00	58 to 62 drops	3
4	63	67	£180.00	£0.00	63 to 67 drops	4
5	68	72	£190.00	£0.00	68 to 72 drops	5
6	73	77	£200.00	£0.00	73 to 77 drops	6
7	78	82	£210.00	£0.00	78 to 82 drops	7
8	83	83	£220.00	£0.00	Exactly 83 drops	8
9	84	None	£220.00	£1.00	84+ = £220 + £1 per drop above 83	9

Build Recalculation Preview

Follow these steps

- 1 Read each pay band**
Check minimum drops, maximum drops, fixed pay and any extra-per-drop rule.
- 2 Check the top band**
Confirm the rule for 84+ drops or any other open-ended band.
- 3 Compare with the intended contract**
Make sure the temporary preview rules reflect the proposed change.
- 4 Build Recalculation Preview**
Generate the preview only after the proposed settings look correct.

- ✓ **Temporary rules**
Editing this preview copy does not change Settings by itself.
- ✓ **Whole-rule check**
Review every band, not only the one you intend to change.
- ✓ **Preview before approval**
The preview is the safe checkpoint before any historical update.

Reports & Exports

Create management reports from RouteOps operational data

Reports & analysis

Carrier Performance

Carrier Overview

Compare carrier activity, revenue, driver cost and operational quality

Carrier Overview uses RouteOps operational data and any operational costs configured for this customer. RouteOps starts with no financial assumptions.

Performance period

Quick range

All Time

This Week

This Month

Last 30 Days

Custom

From

To

2026 / 09 / 14

2026 / 09 / 25

Showing operational performance from 14 Sep 2026 to 25 Sep 2026.

Carrier comparison

Carrier	Status	Profiles	Mappings	Records	Stops	Driver Net Pay	Source Revenue	Worked Route-Days
Example Parcel Network	Active	1	0	80	6016	£15,803.00	£16,844.80	80

Performance rankings

Rankings use the selected performance period. Exception Rate = open/under-review exceptions divided by operational records.

Stops — highest activity

Rank	Carrier	Stops
1	Example Parcel Network	6016

Driver Net Pay — cost measure

Rank	Carrier	Driver Net Pay
1	Example Parcel Network	£15,803.00

Follow these steps

- 1

Choose the performance period

Use All Time, This Week, This Month, Last 30 Days or a custom range.
- 2

Read the carrier comparison

Check records, stops, driver net pay, source revenue and worked route-days.
- 3

Review the rankings

Rankings summarise activity, cost measure, revenue and exception rate.
- 4

Use the selected period consistently

All rankings and comparisons use the performance period shown.

- ✓

Operational comparison

Compare carriers using the same underlying measures.
- ✓

No hidden cost assumptions

Only costs configured for the customer are included.
- ✓

Exception-rate context

Quality is shown alongside volume and financial measures.

Carrier Rankings & Period Comparison

Move from headline ranking to one carrier's detail

This section shows source-revenue and exception-rate rankings, then lets you focus on the selected carrier and period.

Open / Review

1

Linked Profiles

1

Operational costs

Only customer configured cost rules are included. A fresh RouteOps setup contains no built-in scanner, route, vehicle or other commercial data.

Follow these steps

- 1

Review ranking tables
Check activity, pay, source revenue and exception-rate views.
- 2

Read the period message
RouteOps will show whether an earlier equivalent period is available.
- 3

Choose the carrier / source
Select the carrier you want to inspect in detail.
- 4

Read the carrier KPI cards
Records, stops, pay, revenue, route-days, costs, open/review and linked profiles are shown together.

- ✓

Same-period comparison
Rankings are based on the currently selected performance period.
- ✓

Carrier detail
The KPI cards give one carrier's operating picture.
- ✓

Context before conclusions
Use volume, pay, revenue and exceptions together rather than one number alone.

Operational Costs & Trends

Add cost context and read the activity charts

Operational Costs shows only customer-configured cost rules. The charts below compare completed stops and source revenue / driver net pay by day.

Follow these steps

- 1

Check configured costs

Worked route-days and configured operational costs are shown first.
- 2

Read the cost message

If no cost rules are configured, RouteOps makes that clear.
- 3

Review completed stops by day

Use the chart to see activity movement over time.
- 4

Compare revenue and driver pay

Use the second chart to see how source revenue and driver net pay move across the same days.

- ✓

Transparent assumptions

No scanner, route, vehicle or other costs are invented by RouteOps.
- ✓

Trend visibility

Charts make unusual days easier to spot.
- ✓

Commercial context

Revenue and driver pay can be viewed together before deeper analysis.

Daily Performance & Linked Profiles

See the day-by-day detail behind carrier performance

Daily Performance lists the operational totals for each date and shows which profiles / contracts are linked to the selected carrier.

The screenshot displays the Fashearn RouteOps interface. On the left is a sidebar with navigation links: Dashboard, Drivers, Daily Operations, Import Data, Issues & Review, and Reports & Analysis (which is highlighted). Below these are 'Reports & analysis' and 'Carrier Performance' (with a dropdown arrow). The main content area is titled 'Daily performance' and contains a table with the following data:

Date	Records	Stops	Driver Net Pay	Source Revenue
2026-09-14	8	570	£1,545.00	£1,596.00
2026-09-15	8	592	£1,559.00	£1,657.60
2026-09-16	8	580	£1,544.00	£1,624.00
2026-09-17	8	602	£1,587.00	£1,685.60
2026-09-18	8	624	£1,605.00	£1,747.20
2026-09-21	8	578	£1,547.00	£1,618.40
2026-09-22	8	600	£1,561.00	£1,680.00
2026-09-23	8	588	£1,575.00	£1,646.40
2026-09-24	8	684	£1,681.00	£1,915.20
2026-09-25	8	598	£1,599.00	£1,674.40

Below the table is a section titled 'Linked profiles / contracts' with a table:

Profile	Company	Depot	Contract	Source Rate	Mappings
Example Delivery Contract	Northbridge Delivery Group	Manchester Example Depot	Parcel Network A	£2.80	0

A note below the table states: 'Performance comparison is intentionally factual rather than ranking carriers as 'best' or 'worst'. A true margin/profit comparison will be added once the vehicle, Van/Man and other operating-cost rules are confirmed.'

Follow these steps

- 1 Read the daily table**
Check records, stops, driver net pay and source revenue for each date.
- 2 Look for unusual days**
Use the detail to explain movements seen in the charts.
- 3 Check linked profiles / contracts**
Confirm company, depot, contract, source rate and mapping count.
- 4 Keep comparisons factual**
Use the data as operational evidence rather than a simple 'best' or 'worst' label.

- ✓ **Day-level evidence**
Useful for checking why a total changed.
- ✓ **Contract linkage**
See which profile and source rate sit behind the carrier.
- ✓ **Audit-friendly detail**
The report stays tied to actual dates and configured profiles.

Scenario Analysis

Model proposed contract changes without touching live records

Scenario Analysis is a simulation workspace. You can test a proposed source rate, route changes, estimated stops and optional operating-cost assumptions without changing live settings.

Scenario Analysis

Contract / Scenario Impact

Model proposed rates and route changes without changing live records

Simulation only. Nothing entered on this page changes historical records, pay rules, or customer settings.

1. Proposed contract terms

Proposed source rate per completed stop (£)

2.80

Additional routes per week

0

Estimated stops per additional route-day

75.20

Estimated extra fixed / operating cost per added route-day (£)

0.00

☐ Include existing Van/Man cost in contribution estimate

Van/Man cost remains optional. Cost definition pending confirmation.

2. Proposed driver pay rules

Edit a copy of the current pay rules for this scenario only. Live settings remain untouched.

	ID	Min Drops	Max Drops	Fixed Pay	Extra / Drop	Rule Label	Order
	1	1	52	£150.00	£0.00	Up to 52 drops	1
	2	53	57	£160.00	£0.00	53 to 57 drops	2
	3	58	62	£170.00	£0.00	58 to 62 drops	3
	4	63	67	£180.00	£0.00	63 to 67 drops	4
	5	68	72	£190.00	£0.00	68 to 72 drops	5
	6	73	77	£200.00	£0.00	73 to 77 drops	6
	7	78	82	£210.00	£0.00	78 to 82 drops	7

Follow these steps

- Enter proposed contract terms**
Set the source rate, additional routes, estimated stops and any extra cost assumption.
- Choose optional cost treatment**
Include existing Van/Man cost only if that is appropriate for the scenario.
- Review the copied pay rules**
Scenario pay rules are a copy for modelling; live settings remain untouched.
- Scroll down before running**
Check the whole proposed rule table before starting the comparison.

- Simulation only**
 Nothing entered here changes historical records or customer settings.
- Model operational changes**
 Test route growth and rate changes before committing.
- Include costs deliberately**
 Optional costs should be added only when the assumptions are understood.

NOTE Scenario results are planning estimates, not changes to the live RouteOps configuration.

Run & Save a Scenario

Generate the comparison after checking the assumptions

The lower part of Scenario Analysis contains the remaining pay-rule rows, the Run Scenario Comparison button and saved scenario history.

EXAMPLE COMPANY DATA

Do not upload real customer or personal data to the public demo.

ACTIVE PROFILE

Example Delivery Contract

Edit a copy of the current pay rules for this scenario only. Live settings remain untouched.

ID	Min Drops	Max Drops	Fixed Pay	Extra / Drop	Rule Label	Order
1	1	52	£150.00	£0.00	Up to 52 drops	1
2	53	57	£160.00	£0.00	53 to 57 drops	2
3	58	62	£170.00	£0.00	58 to 62 drops	3
4	63	67	£180.00	£0.00	63 to 67 drops	4
5	68	72	£190.00	£0.00	68 to 72 drops	5
6	73	77	£200.00	£0.00	73 to 77 drops	6
7	78	82	£210.00	£0.00	78 to 82 drops	7
8	83	83	£220.00	£0.00	Exactly 83 drops	8
9	84	None	£220.00	£1.00	84+ = £220 + £1 per drop above 83	9

Run Scenario Comparison

Saved scenario history

No scenarios have been saved yet.

Follow these steps

- 1 Finish checking the pay rules**
Confirm every band including any open-ended top band.
- 2 Run Scenario Comparison**
Generate the model only when the assumptions are ready.
- 3 Review the result**
Compare the scenario with the current position before using it for a decision.
- 4 Use saved history when required**
Saved scenarios give you a record of previous modelling.

- ✓ Controlled modelling**
The scenario stays separate from live settings.
- ✓ Repeatable comparisons**
Saved history helps compare different proposals.
- ✓ No accidental activation**
Running a scenario does not activate the proposed contract terms.

Contract Comparison

Compare two saved profiles without changing either one

Contract Comparison is read-only. It is designed to compare two saved contract profiles without activating them or changing live settings or historical records.

Follow these steps

- 1 Open Reports & Analysis > Contract Comparison**
Choose Contract Comparison from the Reports & analysis dropdown.
- 2 Make sure two profiles exist**
The page requires at least two saved profiles before a comparison can be built.
- 3 Select the profiles to compare**
Choose the two contracts you want to place side by side.
- 4 Review the comparison only**
Use the result for analysis; selecting a profile here does not activate it.

- ✓ Read-only comparison**
No contract is changed by opening or using this page.
- ✓ Compare saved setups**
Useful when considering alternative contract profiles.
- ✓ Safe decision support**
Historical records and live settings remain untouched.

Quick Workflow - What to Use and When

A simple route through RouteOps for normal day-to-day work

This page is the shortest version of the guide. Use the normal workflow for everyday operations and only open the advanced tools when there is a specific reason.

1

Dashboard

Check today's position and anything open for review.

2

Drivers

Add or update drivers only when the driver register changes.

3

Daily Operations

Enter who worked, routes and stops; review calculated pay.

4

Issues & Review

Resolve exceptions before treating results as complete.

5

Reports & Analysis

Review totals, exports and management reporting.

Advanced tools - use only when needed

- Smart Import / Customer Onboarding - when bringing new business data into RouteOps.
- File Mapping / Controlled Import - when a carrier file needs controlled mapping and validation.
- Recalculation - when rates or pay rules need a safe historical preview before approval.
- Scenario Analysis / Contract Comparison - for modelling and commercial decision support.

PUBLIC DEMO The screenshots use fictional example data. Never upload real customer or personal data to the public demo.
